

DPG M·TEK Iron Ultra

Micronutrient

GENERAL INFORMATION:

DPG M·TEK Iron Ultra is a concentrated source of chelated iron (1.00% as Fe) that can be used to provide readily available iron to all types of crops including vegetables, vines, nuts and fruits. The formulation delivers and maintains high levels of iron in the soil that is readily available for uptake by the crop and is not tied up in the soil, under either acidic or basic conditions. As a result of this unique formulation, this easy to apply micronutrient has no chlorides, carbonates or sulfates. Everything contained in the product is utilized in the soil to promote microbial activity and available for uptake into the plant.

WARRANTY:

When using this product, conditions can vary substantially due to crop type, soil, weather and other conditions beyond Deerpoint Group's control. Deerpoint Group, Inc. makes no warranty of any kind concerning the application or use of this product. The user assumes all risk of handling and using this product whether or not in accordance with directions and/or suggestions.

CAUTION:

Concentrated DPG M·TEK Iron Ultra should not be admixed with other fertilizers, micronutrients or other materials and could cause plugging when added to the irrigation system together with other types of fertilizers and chemicals. Contact your Deerpoint representative for compatibility information.

MINIMUM GUARANTEED ANALYSIS:

Total Nitrogen (as N).....0.48%
0.48% Water Soluble Nitrogen
Iron (as Fe).....1.00%
1.00% Chelated Iron

DIRECTIONS FOR USE:

DPG M·TEK Iron Ultra can be used on most tree, vine and row crops to meet early season, and continued demand for iron. For nut and fruit trees this application includes: almond, pistachio, citrus, walnut, olive and avocado trees. For vines this application includes: grapes and kiwi. For row crops this application includes: vegetables such as onions, tomatoes, peppers, and carrots, and melons, and berries.

Application Rates for Fertigation:

Orchards and Vineyards: Apply 3 to 17 gallons per acre for either surface or subsurface irrigation. Optimum results are obtained by injection of the DPG M·TEK Iron Ultra during the full irrigation set (start injection 1 hour after starting the irrigation, and stop half an hour before the end of the irrigation set).

Row crops: Apply 2 to 9 gallons per acre for either surface or subsurface irrigation. Optimum results are obtained by injection of the DPG M·TEK Iron Ultra during the full irrigation set (start injection 1 hour after starting the irrigation, and stop half an hour before the end of the irrigation set).

Soil Application Rates:

DPG M·TEK Iron Ultra can also be used as a pre-plant for soils deficient in iron or be side/top dressed for crops that do not have drip or subsurface irrigation. For these applications the DPG M·TEK Iron Ultra should be diluted to make sure an even distribution of the product is obtained. Contact your Deerpoint representative for recommendations regarding the amount to be applied.
